

Meridian drives DVD-A transport

Meridian Audio has announced details of its latest addition to the G Series range – the G98 DVD-Audio transport.

Each G Series component features intriguing new industrial designs by Meridian co-founder Allen Boothroyd, including full-width, all-metal construction and optional rack mounting capability.

The sleek finish, available in pearly silver or all-black, is complemented by Meridian's traditional black glass accents and a new user interface accessed by the softly-lit front panel, rotary volume control and customisable key layouts. Sounds appealing?

Features of the G98 include: video scaling/resolution enhancement for single, high quality path to display; the ability to

play all CD and DVD optical discs including hybrids; a powerful multi-format video processor with HDMI/DVI digital video output; a unique MHR SmartLink which connects high-resolution digital signals to Meridian systems; plus

the ability to decode film soundtracks, enabling external upsampling to 24/96. The suggested retail price of the G98DH DVD Audio transport is £3350.
