

SOUND NEVER LOOKED BETTER

THE NEW MERIDIAN M6 LOUDSPEAKER

SOUND NEVER LOOKED BETTER

Introducing M6 – a loudspeaker developed through an inspired approach to contemporary design by Meridian, world leaders in state-of-the-art audio and video home entertainment systems.

From its slim, soft shape and gentle taper to the use of non-reflective finishes, the first impression given by M6 is intentionally not that of a loudspeaker. However, M6 is the epitome of a Meridian DSP Loudspeaker, with all the features that make them unique in their ability to combine superb sound with elegant design that's at home in any room.

Attractive as a sculpture in its own right, M6 has a circular footprint and pleasing lines that you will admire and enjoy from all angles. Sitting discreetly under the precision-machined aluminium top-cap that highlights each M6 loudspeaker is an elegant 360° diffused light 'halo', that indicates whether the loudspeaker is active or in standby.

INNOVATION IS EVERYWHERE

M6 showcases a striking design approach in combination with unique Meridian technologies that allow a level of performance that is unsurpassed by traditional 'speaker designs. The gently tapered column that creates the enclosure of each M6 is formed from a specially developed, barium-doped resin. Uniquely heavy and rigid, it is precision moulded into a complex form – impossible to achieve using traditional manufacturing materials and techniques. The same cylindrical enclosure gives M6 its naturally wide dispersion pattern, filling your room with superbly-imaged, natural sound that can be enjoyed from any position.

Its smooth, elegant form gives M6 a cylindrical acoustic radiation pattern, offering totally flexible placement options and a sound that does not significantly vary in volume as you move closer to or further away from the loudspeaker.

PERFECT PARTNERS

By partnering M6 Loudspeakers with Meridian's Audio Core 200 you can enjoy a complete Meridian sound system, delivering uncompromised audio performance. Audio Core 200 is perfect for bringing together all your audio sources, offering outstanding preamplifier quality coupled with powerful Meridian Resolution Enhancement technologies including FIFO buffering for the very best sound quality. Enjoy access to multiple sources and a minimal, elegant design that really is easy to use and easy to live with.

TRUE MERIDIAN PERFORMANCE

Don't let its compact design fool you. M6 remains true to Meridian's founders' original design ethos: to create the best-sounding loudspeakers in a form that blends seamlessly into your home. All the necessary amplifiers and electronics are neatly hidden in the space-saving circular base.

Digital Signal Processing (DSP) throughout delivers traditional Meridian benefits, including a level of performance matching that of a conventional loudspeaker with eight times the physical volume.

Acoustically inert, the cylindrical enclosure provides separate, isolated housings for the wide-range and the low-frequency drivers. There's also a tuned porting system that further extends the loudspeaker's low-frequency performance. And with the low-frequency driver mounted so that it plays downwards, bass reproduction is solid and floor-loaded, helping M6 blend effortlessly into the listening environment.
