Switching off FIFO on DSP speakers

It is possible to configure DSP speakers so that one or more sources will operate without engaging the FIFO buffer system within the speaker. This document refers to the "Aux" source.

1. Enter "Config" mode on the Master speaker. This is done by switching on the mains power to the speaker while holding down the "0" key on the MSR+ remote control handset. The display will show the current set-up status of the speaker

2. Press the "Aux" key on the remote. The speaker display will show "AU Aux" like this...

3. Press the right-cursor key twice. The display will show "AU FF. Y" like this...

4. Press the up-cursor until the display shows "AU FF. N"...

5. Switch off the mains power. This action stores the settings. The speakers are now configured.
