

MERIDIAN'S G SERIES PROCESSOR

DIGITAL SOUND PROCESSOR

Priced at £2995, Meridian's G61 Digital Surround Processor builds on the technology that went into its flagship 861 surround processor and is a development of the successful G68. Meridian suggests 'it's ideal for those who do not require

the comprehensive video and multiroom features, tuner or room correction software provided in the G68'. At the heart of the G61 is a DSP engine delivering in excess of 500MIPS (million instructions per second). Processing is performed at 'high

sample rates' and with 48-bit precision throughout.

The G61's controller and surround processor functions meet the latest THX Ultra 2 specifications, while a Windows graphical set-up application (downloadable) allows access to the unit's functions.
