

# Playing Music from Meridian Sooloos

August 2015

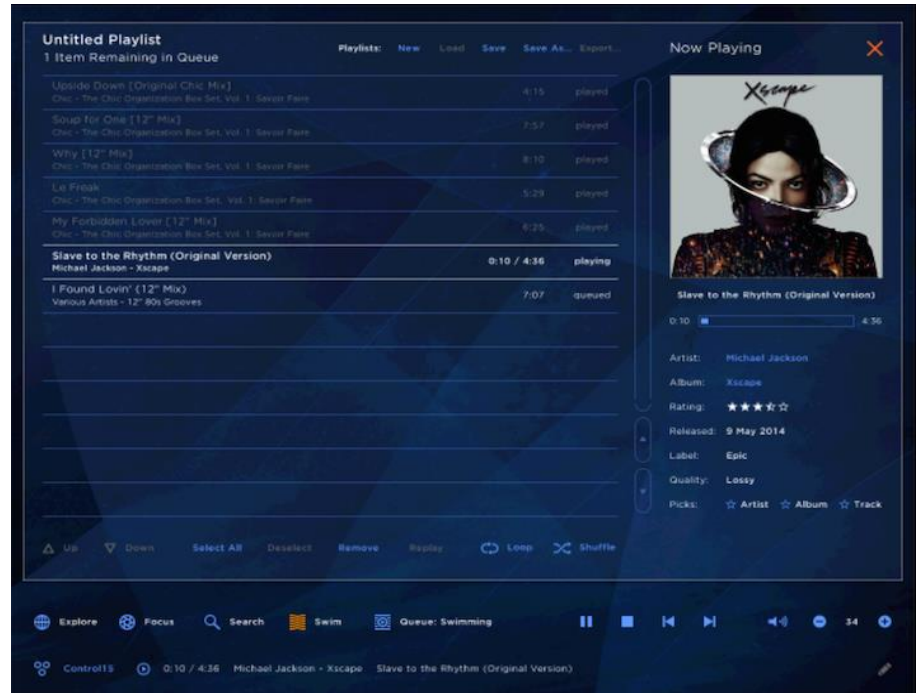

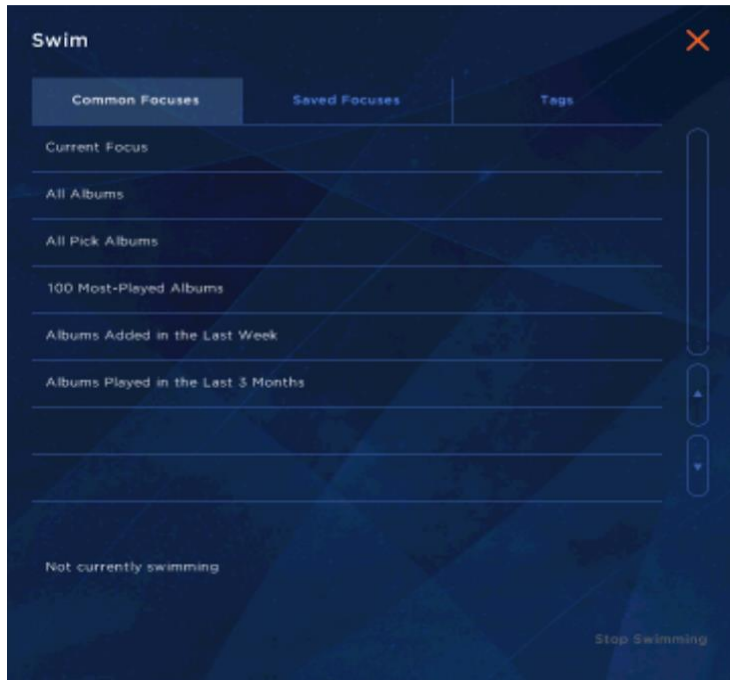

The **Zone Menu** allows you to choose the room you would like to listen to your music in.

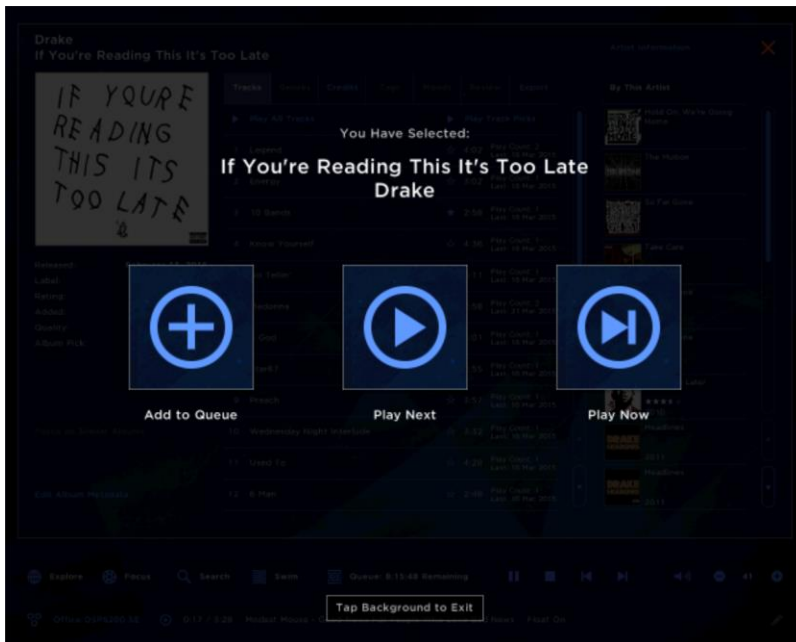

Choose a zone, control its volume, link it to other zones, and adjust other audio settings from this page.

Swim tells Sooloos to intelligently queue and play tracks from a pool of albums that can be as wide or as narrow as you desire.

Swim around in your current Focus, favorite albums, most-played albums, and more.

Want to play something specific? No problem! Play an entire album, album picks (favorite tracks), or individual tracks, directly from the album's information page.

**Add to Queue** enables you to add your selection(s) to the end of the queue without interrupting playback.

**Play Next** will place your selection(s) just below the currently playing track in the queue, without interruption.

**Play Now** will interrupt the current play track and, begin playing your selection(s) immediately.
